

Fabric Shield Storm Panels

Fabric panels are a highly effective alternative to corrugated storm panels.

Our fabric panels are the latest in hurricane protection technology, featuring coverage of large areas and ease of installation. They are available as grommet panels or manual pull down systems.

- Quick and easy installation with no special tools required
- Lightweight with smooth edges
- Convenient storage features, including an optional decorative storage compartment
- Attractive and unobtrusive when deployed
- Easy to clean and resistance to corrosion
- Integrated storm protection that adds value to your home

Impact Windows

Violent wind alone is not the primary cause of window failure. Most dangerous is wind-borne debris that becomes flying missiles that shatter windows, allowing wind, rain, and pressure changes to penetrate your home.

Failure to keep violent winds, flying debris, and torrential rains outside your home can cause enormous devastation, costing homeowners thousands of dollars in property damage. Residential homes in coastal areas are especially vulnerable, which has caused most coastal states to adopt international building codes that require wind-borne debris protection that can withstand winds from 110-160 miles per hour.

Benefits of impact windows and doors include:

- Passive protection 24 hours a day, 7 days a week--great for absentee owners of vacation homes
- Truly invisible protection
- Huge value added to your home

Specifications

All of our hurricane protection systems are engineered, tested and certified for compliance with international building codes.

Storm Protection Product Brochure

Custom Colonial Style Shutters

We offer all popular styles:

- Raised Panel
- Real and Faux Louver
- Board and Batten
- Flat Panel

Shutter Hardware

We offer both cast aluminum and stainless steel Suffolk style hardware for your shutters. Our hardware is both architecturally correct and certified to meet impact standards.

Bermuda/Bahama Shutters

Our impact Bahama shutter line is made of powder coated extruded aluminum components welded together to provide the required strength to withstand hurricane force winds. These shutters feature true louvers that offer both ventilation and views to accent any style Lowcountry home.

Storm Stud Window System

Engineered and introduced by Muhler, the Storm Stud Window System is a revolutionary new product that provides coastal home owners the most convenient built-in storm protection.

- High quality studs constructed of a non-corrosive material for points of attachment
- Fast, easy, and safe installation of fabric storm panels
- Lightweight custom sized storm panels can be carried under one arm
- Translucent fabric material allows light to enter the home
- Fabric rolls up for quick and easy storage
- Aesthetically pleasing appearance

Aluminum Roll Down Shutters

Considered top of the line in hurricane and security protection, this system can be adapted to almost any mounting situation. They can be deployed by a manual crank or a high tech programmable motorized system. These shutters provide excellent protection from wind, rain, and sun while also offering noise abatement and added security.

Storm Panels

Corrugated storm panels are available in a variety of materials to meet every budget.

- Galvanized Steel
- Aluminum
- Clear Lexan
